

COURSES IN DESALINATION

Lecturer **Dr. Corrado Sommariva**

Genoa, Italy

June 24–25, 2013 Thermal Desalination

June 26, 2013 Material Selection in Desalination

The topics include information about desalination technology, starting with basic concepts of water chemistry and desalination mass and energy balance. This is followed by detailed evaluation of two major desalination methods: MSF and MED distillation. The technology description includes theoretical principles of the process, principles of desalination system operation, system design, evaluation of the economics of the process. The courses will describe also the common interface of thermal desalination with associated power plants and various configurations and matching criteria.

The main aspects of desalination economics will then be illustrated including a description of the market environment and prices, project delivery mechanisms (private – turnkey multi-contracts etc.) and budgeting a desalination project.

The economic session will be related to both thermal and RO processes.

Participants should be end users, turnkey contractors, developers who wish to gain a more detailed understanding of thermal desalination and the associated interface with a power plant.

The objectives of the courses are to provide a theoretical basis and practical information on desalination technology with emphasis on thermal processes and to become familiar with the basic aspects of the design of a desalination project using thermal technology and with operating conditions of desalination systems.

Venue Hotel Mediterranee

Via Lungomare 69, 16155 Genoa Pegli, Italy
Tel. +39 (010) 69 73 850; Fax +39 (010) 69 69 850

The courses will be held in an 18th century building with sea-front accommodation on the picturesque Italian Riviera, just 3 km from C. Colombo Airport and 1 km from the motorway tollgate.

Located in Pegli, near the historical town of Genoa, this former residence of the Lomellini family is sheltered from the winds, enjoying a mild climate in winter and temperate in summer.

The beach is nearby and there is a frequent bus service to the centre of Genoa. There is a nearby port and railway station for making a day trip to the beautiful areas of Portofino and Rapallo.

Lecturer

Dr. Sommariva has a PhD in Chemical Engineering from Genoa University and a diploma in management from Leicester University. He is Professor at Genoa University. He has published over 40 papers on desalination and economics and holds 2 patents. He is author of a book on *Desalination Management and Economics* and holds a regular course on technical economical and management aspects of desalination as well as power and desalination plant life extension. Dr Sommariva has experience in both thermal, reverse osmosis and waste water systems. Dr. Sommariva is now Managing Director Middle East at ILF and heads the office in Abu Dhabi. From 2000 to 2008 he led the desalination and

water treatment group as Divisional Director at Mott MacDonald. He has been involved in various roles in the majority of the large scale thermal and RO processes in the Middle East in the last 15 years. He has served as President of the European Desalination Society between 2004 and 2006 and chairman of the WHO committee for safe water desalination guidance documents. For the past 9 years has been on the Board of Directors of the European Desalination Society and International Desalination Association. In 2002 he was the Vice President of the International Desalination Association.

THERMAL DESALINATION

A 2-day intensive course

Lecturer Dr. Corrado Sommariva

June 24–25, 2013, Genoa, Italy

June 24 Basics of Thermal Desalination

- 09.00 Introduction to thermal desalination plants**
Basic heat and mass flows for thermal plants
Performance ratio definitions
Thermal desalination process and energy input
Multiple number of stages and effects
- 09.45 Coffee break**
- 10.00 Combined power and thermal desalination plant**
Thermal desalination plant interfaces with the rest of the yard: Auxiliary equipment;
Main process interface interconnection; Typical layouts
Power – desalination plant combinations: Pass out steam turbine; CCGT; Others
- 11.30 Power and desalination matching optimisation**
Link to the power plant optimisation criteria
Hybrid plants
- 13.00 Lunch**
- 14.00 Material selection and lifetime expectancy**
Basics of the corrosion process in desalination
Criteria for material selection: Evaporator (internal external components);
Balance of plant (pumps etc.)
Life expectancy: Rehabilitation and upgrading; Up-rating
- 16.00 Summary and discussion**

June 25 Technology Review

- 09.00 Multi-stage flash (MSF) technology**
Basics of the process and the technology
Different types of MSF plants: Criteria for classification; Schematic configurations
- 10.30 Coffee break**
- 11.00 Multi-stage flash (MSF) technology**
MSF process description: Flow sheets; Main process parameters profiles
MSF process thermodynamics: Stage simulation model; Concepts of heat transfer
- 13.00 Lunch**
- 14.00 Multiple effect distillation (MED) technology**
Basics of the process and the technology
Typical MED process configurations: MED process description; Flow sheets; Main process parameter profiles
MED process thermodynamics: Stage simulation model; Concepts of heat transfer
Sensitivity aspects of thermal desalination to variation in process parameters
Current status of thermal desalination technology
History of major developments; Future trends :
New technologies and processes on the horizon: MSF-MED hybrid; MSF 2;
Membrane distillation; Renewable thermal desalination; Review of advantages and disadvantages of each technology
- 16.00 Summary and discussion**

MATERIAL SELECTION IN DESALINATION

A 1-day intensive course

Lecturer Dr. Corrado Sommariva

June 26, 2013, Genoa, Italy

Morning

The importance of material selection on water cost

Lifetime design criteria: desalination

Fundamentals in material selection in seawater application

Corrosion: Basic information

Fundamentals of stainless steel composition and properties: Super austenitic steel, Duplex steels

Fundamentals of CuNi alloys composition and properties

Fundamentals of non metallic material application to desalination and properties: Glass reinforced piping, PVC–HDPE; History of PE pipe materials

Recent development and market trends

Thermal desalination plant material selection

Typical material selection for MSF: Operational feedback; Evolution of specification material

Typical material selection for MED: Operational feedback; Evolution of specification

Advantages and disadvantages

Balance of plant (deareator seawater intake, etc.)

Material selection for pumps and auxiliary equipment

Material selection for boilers and turbines

Afternoon

SWRO desalination plant material selection

Typical material selection for SWRO membranes: Operational feedback; Evolution of specification material

Typical material selection for SWRO balance of plant:

Operational feedback; Evolution of specification

Advantages and disadvantages

Material selection for High pressure pumps and auxiliary equipment

Requirements for workshop and site testing

Cost and tariff sensitivity to material selection

Turnkey costs sensitivity to material selection; Turnkey costs sensitivity to raw material costs

Process conditions and material selection

Overview of the operational problems encountered and their solution

Criteria for material selection; Lifetime assessment

Maintenance and routing inspection feedback

Rehabilitation, upgrading and life extension

Managing up-rating: the break even analysis

Managing up-rating: the break even analysis: case study

Open discussion, feedback and questions

Certificate awards and conclusion

COURSES IN DESALINATION

Dr. Corrado Sommariva

REGISTRATION FORM

Surname _____ First name _____

Address _____

Country _____ Telephone _____

Fax _____ E-mail _____

| | | | |
|--------------------------------------|--------------------------------|---------------------------------|---------------------------------|
| <i>Registration fee:</i> | <input type="checkbox"/> 1 day | <input type="checkbox"/> 2 days | <input type="checkbox"/> 3 days |
| <input type="checkbox"/> EDS members | €1,000 | €1,800 | €2,600 |
| <input type="checkbox"/> Non-members | €1,200 | €2,000 | €2,800 |

The fee includes accommodation, lunches, coffee, dinners, course material, a book by Corrado Sommariva *Desalination Management and Economics*.

I wish to register for the course in ☐ *Thermal Desalination*
☐ *Material Selection in Desalination*

Payment can be made by:

Credit card

☐ Visa ☐ Mastercard

Bank Transfer to be sent to the address

Card No. _____

below and a copy emailed to us.

Please take care of your own bank charges

Exp. date _____ Security code _____

Account name: European Desalination Society

Cardholder name _____

Account No. 11863.19

Banca Monte dei Paschi di Siena

67100 L'Aquila, Italy

ABI: 01030 *CAB:* 03600

Swift code: PASCITMMAQU

IBAN code: IT 92 I 01030 03600 000001186319
