

# MEMBRANE TECHNOLOGY, PROCESS AND SYSTEM DESIGN

A 3-day intensive course

Lecturer Mark Wilf, Ph.D.

March 13–15, 2017, Rome, Italy

The seminar topics include practical information about performance and operating conditions of reverse osmosis and nanofiltration technology for brackish and seawater desalting. The program includes introduction to membrane technology, description of commercial membrane elements, illustration of the membrane system design process and overview of systems operation. Calculations of the investment and operating cost of membrane plants, based on design cases will be illustrated. A section of the seminar is dedicated to the modern microfiltration and ultrafiltration technology applied for treatment of potable water and as a pretreatment of feed water for RO systems. Course material also includes information on process and equipment applied in membrane bioreactor (MBR) systems. An overview of commercial MF and UF membrane products will be provided. It will be followed by a description of the implementation process in large membrane treatment plants. The seminar is structured in the form of three seven hour a day sessions of frontal presentation combined with hands-on exercises of calculations of operating parameters and evaluation of process economics. It is expected that knowledge gained during the seminar will enable participants to conduct critical evaluation of feasibility and design parameters of water development projects based on membrane technology and estimation of capital and operating cost. The seminar is directed toward professionals who are familiar with membrane technology, with the objective of providing practical information on commercial products, the design process, operation conditions of membrane systems and economics of the membrane desalting and water treatment applications.

## VENUE

### University Campus Bio-Medico of Rome Faculty of Engineering

Via Alvaro del Portillo 21, 00128 Rome, Italy

Rome is the capital of the Italian Republic. It is the most populous and largest municipality in Italy and is among Europe's major capitals in terms of the amount of terrain it covers.

It is the city with the highest concentration of historical and archi-

tectural riches in the world. Its historical centre, outlined by the enclosing Aurelian Walls, layering nearly three thousand years of antiquity, is an invaluable testimony to the European western world's cultural, artistic and historical legacy and in 1980 it was, together with the

Holy See's property beyond the confines of the Vatican State as well as the Basilica of St. Paul outside the Walls, were added to UNESCO's World Heritage List .

Rome, the heart of Catholic Christianity, is the only city in the world to host an entire foreign state within its confines, the enclave of the Vatican City.

Over 16% of the world's cultural treasures are located in Rome (70% in all of Italy).

## Lecturer

Mark.wilf@ROtechnology.net, [www.ROtechnology.net](http://www.ROtechnology.net)  
Tel. +1 858 444 7334

Dr. Wilf has been involved in process development, system design, project execution, plant operation and maintenance of large, commercial desalination plants in US, Europe and Middle East since 1977.

Dr. Wilf has been involved in development of new desalination process and optimization of membrane technologies. Some of his inventions have resulted in patent applications and are being used in commercial desalination systems.

Dr. Wilf is a regular contributor to professional journals, wrote chapters on membrane technology processes and applications to a number of books. He edited and wrote with other coauthors *The Guidebook to Membrane Desalination Technology* that has been published in 2006. The second book on membrane technology that he edited and contributed, *The Guidebook to Membrane Technology for Wastewater Reclamation*, has been published in 2010.

Dr. Wilf regularly presents and teaches desalination and membrane technology subjects to engineers and water professionals. His teaching activity includes teaching course on membrane technology and desalination for European Desalination Society in L'Aquila, Italy, another annual course in San Diego, CA and other courses industrial companies and engineering organizations.

# COURSE OUTLINE

## **Fundamentals of membrane desalination processes**

- RO process terms
- Concept of semipermeable membranes for water – salt separation
- Configuration of asymmetric and composite membranes
- Membrane types: microfiltration, ultrafiltration, softening, brackish, seawater
- Membrane elements configuration: spiral wound and hollow fibers
- Membrane elements manufacturing process
- Nominal performance and nominal test conditions
- Water transport and salt transport

### **Membrane performance**

- Effect of feed water composition and process parameters on membrane performance
- Translation of nominal test data to element performance in field conditions
- Effect of feed water composition and process parameters on membrane and system operation

## **Water chemistry of the desalination process**

- Feed water types and representative water composition
- Analytical data required for the desalination process design
- Chemicals used in the pretreatment process
- The carbonate system, alkalinity calculations
- Calcium carbonate saturation indicators, methods of calculation. Saturation limits of other sparingly soluble salts. Scale inhibitors.

### **Post treatment**

- Chemistry of post treatment process
- Stabilization of RO permeate

## **Energy usage in desalination systems**

- Components of energy use
- Configuration of pumping systems including energy recovery devices
- Calculation of energy use and energy optimization

## **Pretreatment process configuration**

- Feed water sources and feed water delivery alternatives
- Feed water quality indicators
- Pretreatment system configurations
  - Brackish desalination systems
  - Seawater desalination systems
    - Conventional pretreatment
    - Membrane pretreatment

## **Pretreatment process design**

- Components of conventional pretreatment systems
  - Coagulation and flocculation
  - Media filtration
  - Dissolved Air flotation
  - Chemicals dosing systems
- Sizing of conventional filtration systems

# MEMBRANE TECHNOLOGY, PROCESS AND SYSTEM DESIGN

## A 3-day intensive course

Lecturer Mark Wilf

March 13–17, 2017, Rome, Italy

### REGISTRATION FORM

Surname \_\_\_\_\_ Name \_\_\_\_\_

Affiliation \_\_\_\_\_

Address \_\_\_\_\_

Country \_\_\_\_\_ Telephone \_\_\_\_\_

Fax \_\_\_\_\_ Email \_\_\_\_\_

#### Registration fee:

- EDS members **€2,500**  
 Non-members **€2,700**

The fee includes 4 nights accommodation, lunches, coffee, dinners, course Workbook and CD, and *Guidebook on Membrane Desalination Technology* by Mark Wilf with chapters by Leon Awerbuch, Craig Bartels, Mike Mickley, Graeme Pearce and Nikolay Voutchkov.

#### Payment can be made by:

##### Credit card

Visa  Mastercard

Bank Transfer to be sent to the address below and a copy emailed to us.

Please take care of your own bank charges

**Membrane Technology, Process, System Design and Economics**  
**March 14–16, 2016, Rome, Italy**

**To Course Participants**

Upon registration, you will receive one of the following two books gratis. Please indicate which one you wish to receive

**Guidebook to Membrane Desalination Technology**

Reverse Osmosis, Nanofiltration and Hybrid Systems, Process Design, Applications and Economics

**by Mark Wilf**

ISBN 0-86689-065-3

Chapters by Leon Awerbuch, Craig Bartels, Mike Mickley, Greame Pearce and Nikolay Voutchkov

**Guidebook to Membrane Technology for Wastewater Reclamation**

Wastewater treatment, Pollutants, Membrane filtration, Membrane bioreactors, Reverse osmosis, Fouling, UV oxidation, Process control, Implementation, Economics, Commercial plants design

**by Mark Wilf**

ISBN 0-86689-067-x

Chapters by Craig Bartels, David Bloxom, James Christopher, Adam Festger, Kenny Khoo, Val Frenkel, Jill Hudkins, Jennifer Muller, Greame Pearce, Rod Reardon, Alan Royce

For purchase of the second book there will be a 50% discount on the full price of €149.

Please send me \_\_\_\_ copy(ies) at €75 a copy

Payment in the amount of €\_\_\_\_\_ by credit card
